

# BENDOMAT "SE" SERIES:

## FLEXIBLE TWIN BENDING SYSTEM FOR RE-BARS

- The BENDOMAT SE & DE Series are a new line of automatic re-bar twin-benders for the production of large forms with left and right hand bends.
- Straight bars up to 12 m (40 ft) long with diameter range up to Ø 43 mm (#14) can be processed.
- The re-bars are aligned, loaded, bend and ejected automatically.
- The unique design of the bending heads allows them to move up and down and perform left and right hand bends with one or more re-bars (SE SERIES).

- A gripper located centrally between the bending units, holds the bar(s) into the pre-set position.
- Automatic bending tool changing device is available for models processing up to 20 mm (#6).
- The bending heads are powered through servo-driven geared motors for excellent accuracy and increased production efficiency.
- CNC industrial microprocessor control with user-friendly operation and advanced programming software.
- The "BENDOMAT SE" Series are available in four models 16, 20, 32, and 40.

- The "BENDOMAT" Series can be combined with:
  - ✓ **BCF** Series of measuring and cutting Shear Line, Directly or in-line.
  - ✓ **BCM** Series of measuring and cutting mobile Shear Line.
  - ✓ **MELC FLEXI-LINE** Series Multi-line straightening & cutting machines.
