

# PL-RM ROLL SERIES

## HIGH OUTPUT AUTOMATIC WELDING LINE FOR THE PRODUCTION OF ROLLED MATS

- Most types and sizes of roll-mats can be produced accurately and efficiently directly from coil or pre-cut bars.
- The "PL RM ROLL" Series of mesh welding lines offer servo-driven operation, and ensure simple machine layout, reliable and cost-effective production of rolled mats.
- Ultimate flexibility and unlimited processing capabilities: from 4 mm up to 16 mm (#5) or 20 mm (#6) from coil and up to 40 mm (#14) from straight bars.
- Independent and individually adjustable welding heads cover different product widths and line wire spacings.
- The working width of the machine is a custom-ordered feature for unmatched adaptability to the most demanding production requirements.

- Repositioning of the welding heads is a matter of seconds due to our unique "twist-lock" quick release mechanisms.
- User friendly software requires no programming skills.
- One operator is only required to supervise the production process and remove the automatically produced mats.
- High quality rolling process is achieved via the 'Auto-height' adjustable roll forming system.
